

TynTec Deploys High Performance SMS Solution on Brooktrout's NS700 Platform

Brooktrout Provides Superior Flexibility and the Tools to Design a Customizable SMS Solution

BRUSSELS, BELGIUM , June 14, 2005 — Brooktrout Technology, Inc., a leading supplier of media processing and call control products, today announced that TynTec, a leading provider of High Performance Mobile Messaging Services, has deployed their new SMS solution using Brooktrout's NS700™ SS7 platform.

TynTec offers reliable 2-way SMS through a high-performance messaging platform that uses the company's proprietary direct SS7 signaling access. TynTec allows third parties to connect their applications via SMPP to TynTec's Messaging Platform and to use the high capacity of the system, enabled by the NS700™ SS7 platform, to ensure reliable message delivery with high throughput. TynTec guarantee "no message loss" and delivery times of less than 10 seconds.

TynTec's solution offers superior service levels and is especially suited for business-critical messaging applications. The platform and the services set the standard for Quality of Service (QoS) for SMS, enabling the use for SMS in mission-critical business environments.

"Brooktrout's products were chosen because of their high performance, reliability and their expertise in mobile operator deployments. Brooktrout gave TynTec excellent pre- and post- sales support and continues to provide ongoing consultancy and feature enhancements," said Michael Kowalik, CEO of TynTec. "As a member of the Brooktrout Partner Access Network Program, we have been able to get additional access to useful resources and business partners."

The application uses Brooktrout's NS700™ to provide robust SS7 performance and support for MAP signaling. The NS700™ SS7 platform offers exceptional throughput capabilities, allowing TynTec to deliver 120,000 messages per minute at peak load. The system is deployed in a dual-plane redundant configuration, providing uptime guarantees and service assurance for TynTec's customers. Brooktrout's NS700™ allows developers to leverage the capabilities of the SS7 network and develop carrier-grade applications for SS7 circuit-switched call control, SS7/IP convergence, GSM MAP SMS, CDMA IS-41, and INAP Intelligent Network devices. The NS700™ is at the heart of SS7 signaling gateways, enhanced service nodes, follow-me services, wireless applications, intelligent peripherals, and many more. The NS700™ provides developers with global connectivity, leveraging technology that has been deployed in 70+ countries and has an installed base of over 1 million ports.

About TynTec

TynTec is a specialist provider of mission-critical messaging infrastructure services. By combining the direct SS7 signaling access of a mobile network operator with the seamless cross-network offerings of a professional services company, the company guarantees superior service levels for the global reception and delivery of SMS messages. TynTec serves Wireless Application Service Providers, content providers, retailers and corporate customers by providing high-performance SMS services. The company serves telecom operators, service providers and MVNOs by providing managed services such as Two-Way-SMS, GSM-TDMA Messaging Interconnect and IP Messaging Offloading. TynTec partners with application developers by granting a seamless channel to market into the

wireless space. Representative customers include content providers, retailers, corporations and telecom operators that require high reliability and performance for mission-critical business or consumer services. For further information, please visit www.tyntec.biz.

About Brooktrout Technology

Brooktrout Technology is a leading supplier of media processing, network interface, call control and signal processing products that enable the development of applications, systems and services for both the New Network™ (packet-based) and the traditional telephone (TDM) network. The Company's strategy is to partner with its customers and collaborate closely with them to help accelerate their delivery of new applications and services, increase their existing business, and expand into new markets.
