tyntec

One Number to Connect Them All
tt.One
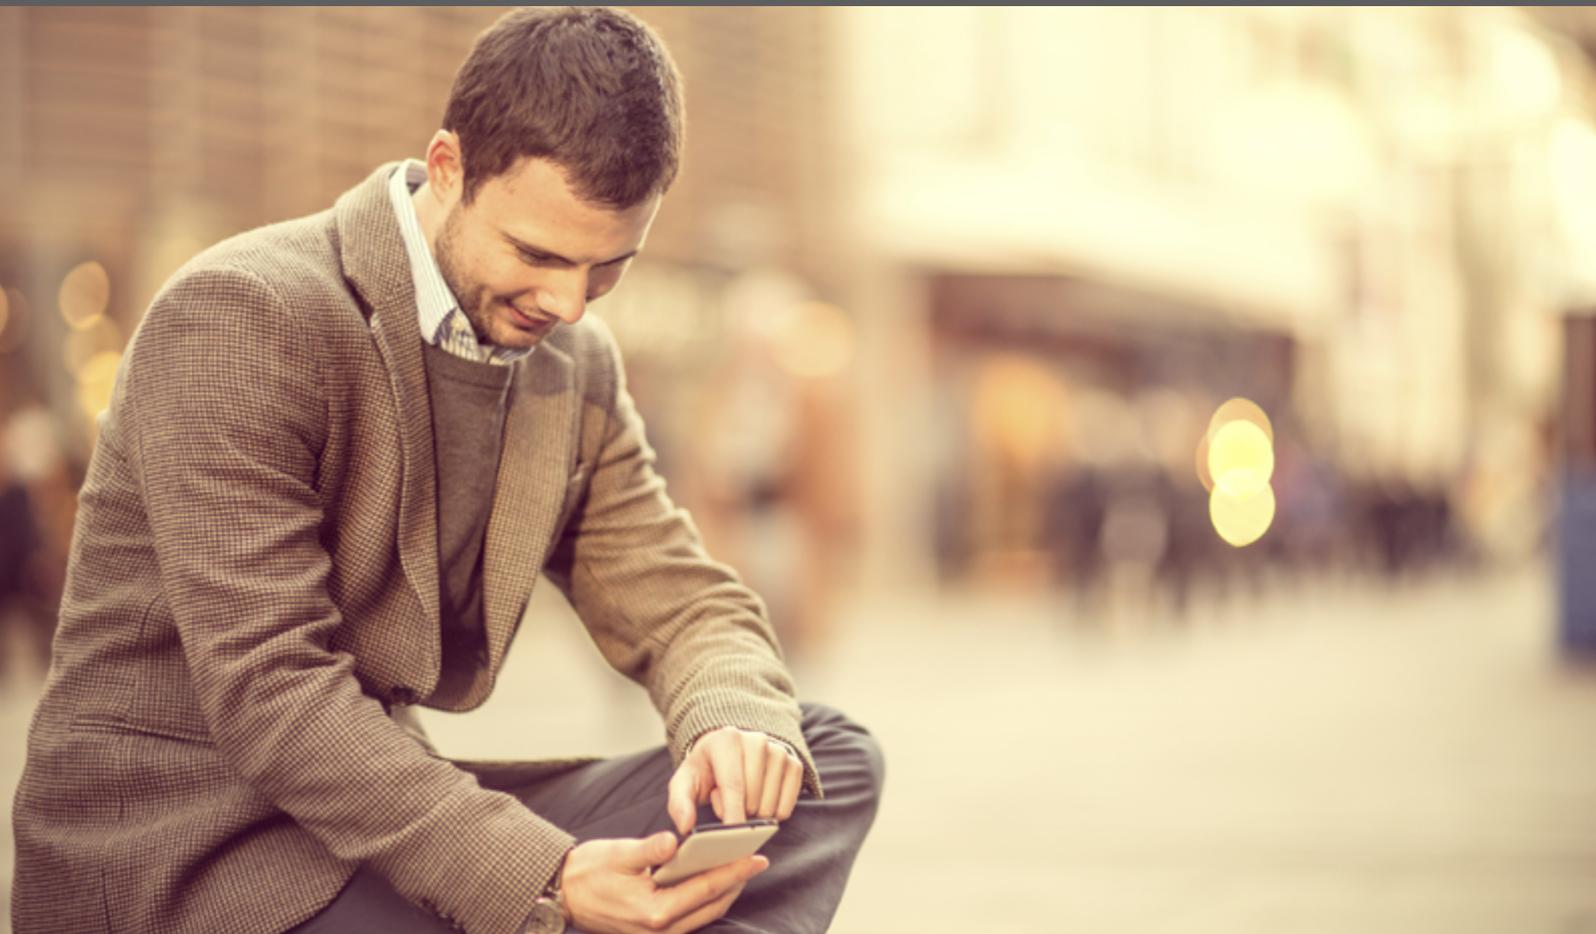

tt.One

Virtualize the number—for more

To get a conversation started—whether it's to provide customer support, foster better workplace collaboration, or power up OTT chats—you need at least two parties: a dialogue. It also means you need a mobile strategy to support their real-time dialogues, including which inbound numbers they can use.

Enter tt.One—a portfolio of mobile phone numbers with 2-way SMS and voice. With all the core mobile communications capabilities enabled, you get complete control of your messaging and voice flow across all communication channels—and let the users choose how to continue the conversation. No wonder they call it the One.

tyntec Distinction

Single point of contact: Create multi-country telecom access without any of the complications of interworking agreements

Seamless mobile-IP interoperability: tyntec's patent-protected infrastructure ensures a uniform end-user SMS and voice service experience

BYOD integration

Bring what works for you: the key to boundless collaboration

01 Employee brings her own device, but uses the company's virtual phone as an app

02 Employee calls or texts contacts using the app, using the company's virtual phone number.

03 Employee's contact sees the company phone number and can contact the employee back on that number.

04 Employee receives the call or text via the app or office phone.

You say your company can't support personally-owned and work devices on the same network. Your employees say no fair. But employee-owned devices needn't represent a threat to company security.

A sound BYOD policy can provide a fluid and secure foundation for collaboration—and tyntec can show you how, by powering enterprise communication applications and phones with virtual phone numbers, and full voice and SMS capabilities. Now employees who want to bring their own device can keep their personal number private—and still text and call from the company's phone number.

Numbers tyntec Provides

- **Mobile numbers without premium fees:** We provide SMS-capable long codes, globally reachable, with no additional fees.
- **Voice & SMS numbers:** You get a single virtual number for 2-way SMS and voice calls.

Key Features

- **Temporary, disposable numbers:** Ultimate privacy protection with numbers that can be assigned temporarily to users, ads, and OTT services.
- **SMS & voice features:** All the standard features of our SMS and voice services provided.
- **Virtualization service:** Get more from your existing pool of phone numbers, including landlines with SMS enablement, without having to buy additional mobile numbers.
- **IT governance:** With virtual numbers, the enterprise gets in control of call and message flows, which can be fully administered by your IT department.

About tyntec

tyntec (www.tyntec.com) is a telecom-web convergence company that connects the immediacy and convenience of telecom with the power of the Internet. Partnering with telecom operators around the world, tyntec enables enterprises and Internet brands to power their applications, authentication, and mission-critical communications with universal mobile services such as SMS, voice and phone numbers in the cloud.

Founded in 2002, tyntec employs over 150 people in six offices around the globe, serving more than 500 global businesses, Internet brands and telecom operators.
